This report makes reference to the following document:

D1: US 2003/110890 A1 (LI XINGBANG ET AL)
19 June 2003 (2003-06-19)

D1 discloses a process for producing metal powders in which a metal oxide is mixed with a reducing agent and reduced in a furnace. The reaction product is leached out, washed and dried.

The process according to the present claim 1 is novel in that the oxide used has a mean particle size of 0.5-20 μm and a specific surface of 0.5-20 m^2/g .

The problem of providing a more reproducible powder (especially with respect to burning time and spontaneous-ignition temperature) is thereby solved.

None of the available citations discloses a solution as per claim 1 to the above-indicated problem.
